Multimodal Torus in the Weakly Electric Fish Eigenmannia-Henning Scheich 2012-12-06 Ever since the behavioral work of Lissmann (1958), who showed that the weak electric discharges of some families of fish (hitherto considered useless for prey capture or for scaring away enemies) are part of a strange sensory system, these fish have attracted attention from biologists. The subsequent discovery of the electroreceptors in the skin of gymnotids and mormyrids (Bullock et al. 1961; Fessard and Szabo 1961) and the evidence that the ampullae of Lorenzini of nonelectric sharks and rays are also electroreceptors (Digkgraaf and Kalmijn 1962) was a start for a lively branch of physiological, anatomical, and behavioral research. Many findings of general importance for these fields have made the case to which extremes the performance of the central and peripheral nervous systems can be driven. Among those findings is the temporal accuracy of the

pacemaker of some high-frequency fish which controls the electric organ, probably the most accurate biological clock (coefficient of variation Folklore-Joseph Jacobs 1902 Most vols. for 1890- contain list of members of the Folklore Society. Bachus 2003-07-25 Pumps are commonly encountered in industry and are essential to the smooth running of many industrial complexes. Mechanical engineers entering industry often have little practical experience of pumps and their problems, and need to build up an understanding of the design, operation and appropriate use of pumps, plus how to diagnose faults and put them right. This book tackles all these aspects in a readable manner, drawing on the authors' long experience of lecturing and writing on centrifugal pumps for industrial

audiences.

Ranaviruses-Matthew J. Gray 2015-04-27 This is the first book on ranaviruses. Ranaviruses are double-stranded DNA viruses that cause hemorrhagic disease in amphibians, reptiles, and fish. They have caused mass die-offs of ectothermic vertebrates in wild and captive populations around the globe. There is evidence that this pathogen is emerging and responsible for population declines in certain locations. Considering that amphibians and freshwater turtles are suitable hosts and the most imperiled vertebrate taxa in the world, ranaviruses can

have significant impacts on biodiversity and ecosystem function. Additionally, many fish that are raised in aquaculture facilities and traded internationally are suitable hosts; thus, the potential economic impact of ranaviruses is significant. Ranaviruses also serve as a model for replication and gene function of large double-stranded DNA viruses. There is an urgent need to assemble the contemporary information on ranaviruses and provide guidance on how to assess their threats in populations. Through the Global Ranavirus Consortium, 24 experts from six countries were organized to write this volume, the first book on ranaviruses. The book begins with a discussion on the global extent of ranaviruses, case histories of infection and disease in ectothermic vertebrates, and current phylogeny. Basic principles of ranavirus ecology and evolution are covered next, with a focus on host-pathogen interactions and how the virus emerges in its environment. There are two chapters that will discuss the molecular biology of ranaviruses, host response to infection, and the genes responsible for immune system

evasion. One chapter establishes standards for testing for infection and diagnosing ranaviral disease. The book ends by providing guidance on how to design ranavirus surveillance studies and analyze data to determine risk, and discussing the role of the Global Ranavirus Consortium in organizing research and outreach activities. Nature Tourism-Tensie Whelan 1991 Tourism remains the world's most significant growth industry, and is a lifeline to the future for many developing countries. But there is often an environmental price to be paid for tourism, which is an activity that concentrates pressure on landscapes in both spatial (most people want to see the same things) and temporal (most people travel at the same time) senses. This collection addresses both the growing trend in favor of "ecotourism" and its environmental impacts. Contributors present a sampling of nature tourism experiences (Kenya, Yellowstone, Costa Rica), and deal with nuts-and-bolts issues such as economics, marketing, and the crucial role of local involvement. The book focuses on the ways in which nature tourism can continue to

stimulate local economies while minimizing environmental degradation. ISBN 1-55963-037-X: \$34.95.

Arabella and the Magic Pencil-Stephanie Ward 2020-05-12 Arabella is a beloved only child who has everything a little girl could want. That is, until her brother, Avery, the master of mayhem, comes along. While she certainly loves him, she finds that it's sometimes very hard to like him. So she spends her days creating marvelous, magnificent things with her magic pencil, and trying to ignore him. But when he spoils her

perfectly proper tea party, she decides drastic action is required and she erases him from her life. Oops! But things aren't the same without him — can she get him back? Arabella and the Magic Pencil is a charming story, which will appeal to any child coming to terms with a new sibling and to caregivers who are supporting changing family dynamics, as well as those who love fantasy and engaging, alliterative language.

Mousetrapped-Catherine Ryan Howard

2010-03-19 "A unique book by a brilliantly witty, instantly loveable author... I couldn't put it down." --Trashionista.com, Top 10 Reads of 2010

Three big dreams, two Mouse Ears and one J-1 visa. What could possibly go wrong in the happiest place on earth? When Catherine Ryan Howard decides to swap the grey clouds of Ireland for the clear skies of the Sunshine State, she thinks all of her dreams - working in Walt Disney World, living in the United States, seeing a Space Shuttle launch - are about to come true. Ahead of her she sees weekends at the beach, mornings by the pool and an inexplicably skinnier

version of herself skipping around Magic Kingdom. But not long into her first day on Disney soil - and not long after a breakfast of Mickey-shaped pancakes - Catherine's bubble bursts and soon it seems that among Orlando's baked highways, monotonous mall clusters and world famous theme parks, pixie dust is hard to find and hair is downright impossible to straighten. The only memoir about Space Shuttle launches, the town that Disney built, religious theme parks, Bruce Willis, humidity-challenged hair, the Ebola virus and - oh, yeah - working in Walt Disney World, *MOUSETRAPPED: A Year and A Bit in Orlando, Florida* is the hilarious story of what happened when one Irish girl went searching for happiness in the happiest place on earth. *TABLE OF CONTENTS PART 1: An Irish Girl in a Disney World The Call of the Mouse Nordisk conversationslexikon-Gustav Storm 1887 Tiempo libre- 1985*
