Relational Depth-Rosanne Knox 2012-12-17 As a therapist, have you ever experienced moments of absolute trust, understanding and empathy with a client? Such moments of relational depth can feel like a therapeutic breakthrough for the therapist. But what is the client's experience? And what does the research tell us about the potential therapeutic benefits? This wide-ranging book offers a fascinating survey of the latest thinking and research on in-depth therapeutic encounters. Combining vivid case studies with the latest research evidence, this book: • Examines a breadth of perspectives: from working with young clients to working in groups • Explores relational depth in a wider theoretical context: for example, in relation to dialogue, presence, mutuality and the transpersonal. • Considers important professional issues, such as how relational depth can be assessed and its value in personal development and supervision contexts. By exploring the meaning, challenges and experiences of relational depth, it provides insight into an important dimension of therapeutic practice and, for many, will act as a guide to new ways of thinking about their therapeutic relationships. This book is an essential read for all trainees and practitioners in Counselling and Psychotherapy who want to deepen their levels of therapeutic relating.

Catastrophe-Richard A. Posner 2004-11-11 Catastrophic risks are much greater than is commonly appreciated.

Collision with an asteroid, runaway global warming, voraciously replicating nanomachines, a pandemic of gene-spliced smallpox launched by bioterrorists, and a world-ending accident in a high-energy particle accelerator, are

among the possible extinction events that are sufficiently likely to warrant careful study. How should we respond to events that, for a variety of psychological and cultural reasons, we find it hard to wrap our minds around? Posner argues that realism about science and scientists, innovative applications of cost-benefit analysis, a scientifically literate legal profession, unprecedented international cooperation, and a pragmatic attitude toward civil liberties are among the keys to coping effectively with the catastrophic risks.

Risk and the War on Terror-Louise Amoore 2008-06-11 This book offers the first comprehensive and critical investigation of the specific modes of risk calculation that are emerging in the so-called War on Terror. Risk and the War on Terror offers an interdisciplinary set of contributions which debate and analyze both the empirical manifestations of risk in the War on Terror and their theoretical implications. From border controls and biometrics to financial targeting and policing practice, the imperative to deploy public and private data in order to 'connect the dots' of terrorism risk raises important questions for social scientists and practitioners alike. How are risk technologies redeployed from commercial, environmental and policing domains to the domain of the War on Terror? How can the invocation of risk in the War on Terror be understood conceptually? Do these moves embody transformations from sovereignty to governmentality; from discipline to risk; from geopolitics to biopolitics? What are the implications of such moves for the populations that come to be designated as 'risky' or 'at risk'? Where are the gaps, ambiguities and potential resistances to these practices? In contrast with previous historical moments of risk measurement, governing by risk in the War on Terror has taken on a distinctive orientation to an uncertain future. This book will be of strong interest to students and researchers of international studies, political science, geography, legal studies, criminology and sociology.

The Court Cities of Northern Italy-Charles M. Rosenberg 2010-06-21 This volume examines the painting, sculpture, decorative arts, and architecture produced in nine important court cities of Italy during the course of the fourteenth, fifteenth, and sixteenth centuries. Although each chapter represents a separate study of a particular geographical locale, many common themes emerge. This volume gives a multifaceted consideration of the art created for princes, prelates, confraternities, and civic authorities - works displayed in public squares, private palaces, churches, and town halls. Including six essays specially commissioned that explore the interaction of artists and their civic and/or courtly patrons within the context of prevailing cultural, political, and religious circumstances, The Court Cities of Northern Italy provides a rich supplement to traditional accounts of the artistic heritage of the Italian Renaissance, which has traditionally focused on the Florentine, Venetian, and Roman traditions. The book includes 35 color plates and 221 black and white illustrations.

Life as Surplus-Melinda E. Cooper 2011-02-01 Focusing on the period between the 1970s and the present, Life as Surplus is a pointed and important study of the relationship between politics, economics, science, and cultural values in the United States today. Melinda Cooper demonstrates that the history of biotechnology cannot be understood without taking into account the simultaneous rise of neoliberalism as a political force and an economic policy. From the development of recombinant DNA technology in the 1970s to the second Bush administration's policies on stem cell research, Cooper connects the utopian polemic of free-market capitalism with growing internal contradictions of the commercialized life sciences. The biotech revolution relocated economic production at the genetic, microbial, and cellular level. Taking as her point of departure the assumption that life has been drawn into the circuits of value creation, Cooper underscores the relations between scientific, economic, political, and social practices. In penetrating analyses of Reagan-era science policy, the militarization of the life sciences, HIV politics, pharmaceutical imperialism, tissue engineering, stem cell science, and the pro-life movement, the author examines the speculative impulses that have animated the growth of the bioeconomy. At the very core of the new post-industrial economy is the transformation of biological life into surplus value. Life as Surplus offers a clear assessment of both the transformative, therapeutic dimensions of the contemporary life sciences and the violence, obligation, and debt servitude crystallizing around the emerging bioeconomy.

At first, Maggie is just feeling stubborn when she declares she won't learn cursive. What's wrong with print, anyway? But soon all her classmates are buzzing about Maggie's decision, especially after her teacher, Mrs. Leeper, says Maggie's cursive is so sloppy that her name looks like "Muggie." With "Muggie Maggie" ringing in her ears, Maggie absolutely, positively won't back down...until she's appointed class mail messenger. All the letters that Mrs. Leeper sends to the office are in cursive, and Maggie thinks they are written about her. But there's only way to know for sure...so what's Maggie going to do?
