The Hardware Hacker-Andrew Bunnie Huang 2019-08-27 For over a decade, Andrew "bunnie" Huang, one of the world's most esteemed hackers, has shaped the fields of hacking and hardware, from his cult-classic book Hacking the Xbox to the open-source laptop Novena and his mentorship of various hardware startups and developers. In The Hardware Hacker, Huang shares his experiences in manufacturing and open hardware, creating an illuminating and compelling career retrospective. Huang's journey starts with his first visit to the staggering electronics markets in Shenzhen, with booths overflowing with capacitors, memory chips, voltmeters, and possibility. He shares how he navigated the overwhelming world of Chinese factories to bring chumby, Novena, and Chibitronics to life, covering everything from creating a Bill of Materials to choosing the factory to best fit his needs. Through this collection of personal essays and interviews on topics ranging from the legality of reverse engineering to a comparison of intellectual property practices between China and the United States, bunnie weaves engineering, law, and society into the tapestry of open hardware. With highly detailed passages on the ins and outs of manufacturing and a comprehensive take on the issues associated with open source hardware, The Hardware Hacker is an invaluable resource for aspiring hackers and makers.

Environmental Contaminants: Ecological Implications and Management-Ram Naresh Bharagava 2019-10-28 As we know, rapid industrialization is a serious concern in the context of a healthy environment. Various physico-chemical and biological approaches for the removal of toxic pollutants are available, but unfortunately these are not very effective. Biological approaches using microorganisms (bacterial/fungi/algae), green plants or their enzymes to degrade/detoxify environmental contaminants such as endocrine disrupting chemicals, toxic metals, pesticides, dyes, petroleum hydrocarbons and phenolic compounds are eco-friendly and low cost. This book provides a much-needed, comprehensive overview of the various types of contaminants, their toxicological effects on the environment, humans, animals and plants as well as various eco-friendly approaches for their management (degradation/detoxification). As such it is a valuable resource for a wide range of students, scientists and researchers in microbiology, biotechnology, environmental sciences.

Corporate Handbook, Malaysia- 1996

Hand-book of Chinese Buddhism-Ernest John Eitel 1904 This reference text is a highly useful tool for the student of Chinese religious literature as well as for general readers in need of a handy companion text to the rest of this rich collection. The dictionary in this volume contains vocabularies of Buddhist terms in Pali, Singhalese, Siamese, Burmese, Tibetan, Mongolian and Japanese. If you find yourself hampered by the continual recurrence of Sanskrit and other foreign terms embedded in texts on Tibetan Buddhism, generally with no explanation, this volume will be quite helpful in smoothing the path to understanding.

Microbial Action on Hydrocarbons-Vivek Kumar 2019-02-08 The book discusses ways to overcome the side effects of using hydrocarbon-based products as energy sources. Hydrocarbons produce raw crude oil waste of around 600,000 metric tons per annum, with a range of uncertainty of 200,000 metric tons per year. The various chapters in this book focus on approaches to reduce these wastes through the application of potential microbes, in a process called bioremediation. The book is a one-stop reference resource on the methods, mechanisms and application of the bio-composites, in the laboratory and field. Focusing on resolving a very pressing environmental issue, it not only provides details of existing challenges, but also offers deeper insights into the possibility of solving problems using hydrocarbon bioremediation.

Advances in Data Sciences, Security and Applications-Vanita Jain 2019-12-02 This book gathers the best papers presented at the International Conference on Data Sciences, Security and Applications (ICDSSA 2019), organized by Bharati Vidyapeeth's College of Engineering, New Delhi, India, on 7-8 March 2019. The respective contributions present original research work, essential information, techniques and applications in the fields of data mining, artificial intelligence and computational intelligence. They also discuss machine learning in business intelligence and big data analytics, soft computing, security, cloud computing and the latest trends.

Acid Mine Drainage-Geoffrey S. Simate 2021-02-24 Acid Mine Drainage (AMD) is essentially the flow of water polluted with metals and other substances from existing/old mining areas and is considered as one of the sources of pollution. A wide range of technologies are available for preventing AMD generation and/or treating the AMD before discharge, but there is a shift towards recovery of industrially useful materials and products from AMD.

Acid Mine Drainage: From Waste to Resources explores novel methods developed for the reuse and/or recovery of industrially useful materials from AMD including discussing generation, prediction, prevention, and remediation processes. It includes legislation and policy framework governing AMD and its environmental/health impacts. Provides a detailed overview of the mining operations and discusses the geochemical and hydrogeological context of acid mine drainage AMD formation, prediction and impact Presents holistic approach to AMD generation, prediction, prevention, and remediation processes Exclusive material on recycling and recovery of industrially useful materials from AMD Gives detailed overview of the legislation and policy regulatory framework governing the management of AMD Analyses the effects of AMD on the environment and health This volume is aimed at researchers and professionals in metallurgical engineering, chemical engineering, environmental engineering, and mining engineering.

The Propaganda Model Today-Joan Pedro-Carañana 2018-10-25 While the individual elements of the propaganda system (or filters) identified by the Propaganda Model (PM) – ownership, advertising, sources, flak and anti-communism – have previously been the focus of much scholarly attention, their systematisation in a model, empirical corroboration and historicisation have made the PM a useful tool for media analysis across cultural and geographical boundaries. Despite the wealth of scholarly research Herman and Chomsky's work has set into motion over the past decades, the PM has been subjected to marginalisation, poorly informed critiques and

misrepresentations. Interestingly, while the PM enables researchers to form discerning predictions as regards corporate media performance, Herman and Chomsky had further predicted that the PM itself would meet with such marginalisation and contempt. In current theoretical and empirical studies of mass media performance, uses of the PM continue, nonetheless, to yield important insights into the workings of political and economic power in society, due in large measure to the model's considerable explanatory power.

Dig Where You Are-Nan Alexander Doyal 2017-01-17 Dig Where You Are is about seven remarkable men and women who have solved some of the biggest challenges facing our societies today. From the slums of Mumbai, the villages of Tibet and northeast Thailand, the inner cities of Philadelphia and San Francisco, and a ghetto outside Stockholm, Dig Where You Are tells of an artist, a surgeon, a teacher, a criminologist, an economist, a community organizer and a general physician each of whom saw a way beyond suffering and injustice, took responsibility for the wellbeing of others and ended up transforming lives and communities across the world. Who are they and how did they do it? These are the stories of everyday people armed with a belief in the potential of others, a passion to change things for the better and a healthy dose of grit and persistence. Their lives are an inspiration for anyone who wants to make a difference but is not sure how to start. They remind us that it is small groups of committed and caring people-not large institutions and governments-who really change the world. Book jacket.

The Knight of Malta-John Fletcher 2018-09-18 The Knight of Malta is a Jacobean era stage play, a tragicomedy in the canon of John Fletcher and his collaborators. It was initially published in the first Beaumont and Fletcher folio of 1647. In the period in which the play was written, King James I was pursuing a policy of Spanish appeasement; the play's choice of subject, the Knights of Malta, has been interpreted in light of that policy, as a gesture at royal flattery. Modern critics have focused on the play's Christian/Muslim conflict, its sexual politics, and the racial implications of making the play's villain an African woman.

The Myth of the Good War-Jacques R. Pauwels 2015-03-06 In the spirit of historians Howard Zinn, Gwynne Dyer, and Noam Chomsky, Jacques Pauwels focuses on the big picture. Like them, he seeks to find the real reasons for

the actions of great powers and great leaders. Familiar Second World War figures from Adolf Hitler to Franklin D. Roosevelt and Joseph Stalin are portrayed in a new light in this book. The decisions of Hitler and his Nazi government to go to war were not those of madmen. Britain and the US were not allies fighting shoulder to shoulder with no motive except ridding the world of the evils of Nazism. In Pauwels' account, the actions of the United States during the war years were heavily influenced by American corporations -- IBM, GM, Ford, ITT, and Standard Oil of New Jersey (now called Exxon) -- who were having a very profitable war selling oil, armaments, and equipment to both sides, with money gushing everywhere. Rather than analyzing Pearl Harbor as an unprovoked attack, Pauwels notes that US generals boasted of their success in goading Japan into a war the Americans badly wanted. One chilling account describes why President Truman insisted on using nuclear bombs against Japan when there was no military need to do so. Another reveals that Churchill instructed his bombers to flatten Dresden and kill thousands when the war was already won, to demonstrate British-American strength to Stalin. Leaders usually cast in a heroic mould in other books about this war look quite different here. Nations that claimed a higher purpose in going to war are shown to have had far less idealistic motives. The Second World War, as Jacques Pauwels tells it, was a good war only in myth. The reality is far messier -- and far more revealing of the evils that come from conflicts between great powers and great leaders seeking to enrich their countries and dominate the world.

Introduction to Advanced Food Process Engineering-Jatindra Kumar Sahu 2014-03-24 Food materials are processed prior to their consumption using different processing technologies that improve their shelf life and maintain their physicochemical, biological, and sensory qualities. Introduction to Advanced Food Process Engineering provides a general reference on various aspects of processing, packaging, storage, and quality control and assessment systems, describing the basic principles and major applications of emerging food processing technologies. The book is divided into three sections, systematically examining processes from different areas of food process engineering. Section I covers a wide range of advanced food processing technologies including osmo-concentration of fruits and vegetables, membrane technology, nonthermal processing, emerging drying technologies, CA and MA storage of fruits and vegetables, nanotechnology in food processing, and computational fluid dynamics modeling in food processing. Section II describes food safety and various non-destructive quality assessment systems using machine vision systems, vibrational spectroscopy, biosensors, and chemosensors. Section III explores waste management, by-product utilization, and energy conservation in food processing industry. With an emphasis on novel food processes, each chapter contains case studies and examples to illustrate state-of-the-art applications of the technologies discussed.

The DASSIE and the Hunter-Jeff Opland 2005 This book chronicles the life, times and poetry of extraordinary Xhosa praise poet, the late David Yali-Manisi, and his growing friendship and fruitful working relationship with author Jeff Opland. Opland is a renowned scholar who is recognized world-wide as a foremost authority on Xhosa izibongo or praises. His perceptive account gives insight not only into Manisi himself, but the complex art form of praise poetry—a spontaneous performance art of extraordinary subtlety and sophistication that, as Opland notes, embodies in itself the ancestral culture, history and politics of the Xhosa nation. What is unique about this book is the personal dimension that Opland brings to the subject, fusing impeccable scholarship with self-reflective autobiographical narrative. The book incorporates a variety of styles, from autobiographical to verbatim interview, and its shift of voice reflect the author's own internal journey as his deepening friendship with Manisi works its humanizing alchemy. The book is a celebration of the supreme talent of a gifted African poet, and the interaction of a black and a white South African reaching out to each other.
