Upcycled Technology-Daniel Davis 2019-03-31 Transform old tech into amazing, modern inventions Fans of Popular Science, Smithsonian's Maker Lab, and The Big Book of Makerspace Projects will love Upcycled Technology. DIY science projects using your discarded stuff: We all have a drawer or closet full of old discarded tech just sitting around gathering dust. Memories of a bygone technological era that have been replaced by newer, shiner, smarter devices. What can you do with them? Most of us don't even know how to properly dispose of them. If only there was a way to save them from their untimely fate. DIY electronics: Well empty out that drawer and grab a screwdriver, because the time has come to bring these old devices back from the grave! Old technology may no longer be useful, but it isn't useless. Hidden inside often discarded devices is a treasure trove of motors, magnets, screens, and other parts just waiting for a chance to be upcycled! Hardcore electronics and computer projects: And this type of "upcycling" doesn't mean turning an old CD into a coaster, it means something a little more hardcore. Readers will learn: How to make a great Wi-Fi security camera with an old cell phoneHow to make a basic 3D printer out of old computer disk drivesWhat can be made with the rare-earth magnets inside old hard drives or the reusable LCD screens in old phonesAnd much more Creating new zombie tech from old tech is eco-friendly and it's also a fantastic way to learn about the technology we use (or used to use) every day. The only limit is your curiosity and willingness to tinker! A tech book for tinkerers and makers

Economic Analysis of Suicide Prevention-Yasuyuki Sawada 2017-10-24 This book examines the causes and consequences of suicide from the perspective of economics. The approach here differs from those in medical, psychiatric, epidemiological, and sociological studies of suicide and is thus novel in a way that highlights the importance of economic and institutional settings in the problem of suicide. The authors argue that suicide imposes a tremendous economic cost on contemporary society in a variety of ways, requiring the government to develop an effective prevention strategy. An empirical analysis using data from Japan and other developed countries shows that natural disasters and economic crises increase suicide rates, while liberal government policies favorable to the poor can decrease them. Further, the types of effective prevention strategies in the context of railway/subway suicides, celebrity suicides, public awareness campaigns, and education using data primarily from Japan are revealed. This book ultimately contributes to an understanding of suicides and the development of evidence-based policy proposals. The Japanese version of this book won the 56th Nikkei Prize for Economics Books (Nikkei Keizai Toshi Bunka Award) in 2013. Yasuyuki Sawada is Chief Economist of the Asian Development Bank and Professor of Economics at The University of Tokyo. Michiko Ueda is Associate Professor in the Faculty of Political Science and Economics at Waseda University. Tetsuya Matsubayashi is Associate Professor of Osaka School of International Public Policy (OSIPP) at Osaka University.

Government Consultation-H. A. Delap 1976 Site characteristics have set an almost impenetrable barrier to the development of adequate services in many of the existing beach-based operations. It was the objective of this group to attempt to break through the barrier and provide reasonable solutions in a number of specific situations. The solutions discussed are not always in the civil engineer field; the naval architect-boat builder and the marine mechanical engineer have also much to offer

Theoretical Fundamentals of Atmospheric Optics-Yu. M. Timofeyev 2008 The authors of this book present the theoretical fundamentals of atmospheric optics as a science of the propagation, transformation and generation in the atmosphere of electromagnetic radiation from the ultraviolet to microwave range of the spectrum. The main characteristics of the planets of the solar system and atmospheres are described. Special attention is given to the equation of transfer of radiation in different spectrum ranges; the absorption of radiation by atmospheric gases and aerosol, molecular, aerosol and different types of non-resonant scattering; atmospheric diffraction; reflection of radiation from the surface; and glow of the atmosphere. They present the method of calculating radiation for the solar and thermal ranges of the spectrum. The monograph will be of interest to experts working in the areas of the physics and optics of the atmosphere and also suitable for students and postgraduates studying the physics of atmosphere, meteorology, physical ecology and monitoring of the environment.

Color and Light in Nature-David K. Lynch 2001-06-11 We live in a world of optical marvels - from the commonplace but beautiful rainbow, to the rare and eerie superior mirage. But how many of us really understand how a rainbow is formed, why the setting sun is red and flattened, or even why the sky at night is not absolutely black? This beautiful and informative guide provides clear explanations to all naturally occurring optical phenomena seen with the naked eye, including shadows, halos, water optics, mirages and a host of other spectacles. Separating myth from reality, it outlines the basic principles involved, and supports them with many figures and references. A wealth of rare and spectacular photographs, many in full color, illustrate the phenomena throughout. In this new edition of the highly-acclaimed guide to seeing, photographing and understanding nature's optical delights, the authors have added over 50 new images and provided new material on experiments you can try yourself.

Fundamentals of Atmospheric Radiation-Craig F. Bohren 2006-08-21 Meeting the need for teaching material suitable for students of atmospheric science and courses on atmospheric radiation, this textbook covers the fundamentals of emission, absorption, and scattering of electromagnetic radiation from ultraviolet to infrared and beyond. Much of the contents applies to planetary atmosphere, with graded discussions providing a thorough treatment of subjects, including single scattering by particles at different levels of complexity. The discussion of the simple multiple scattering theory introduces concepts in more advanced theories, such that the more complicated two-stream theory allows readers to progress beyond the pile-of-plates theory. The authors are physicists teaching at the largest meteorology department in the US at Penn State. The problems given in the text come from students, colleagues, and correspondents, and the figures designed especially for this book facilitate comprehension. Ideal for advanced undergraduate and graduate students of atmospheric science. \* Free solutions manual available for lecturers at www.wiley-vch.de/supplements/ Hypnobirth-Yulia Watters 2015-02-25 Hypnobirth: Theories and Practice for Healthcare Professionals is a guide for healthcare providers who work with expecting mothers and their loved ones. Yulia Watters applies the theory and application of Milton Erickson to hypnosis during pregnancy, childbirth, and post-partum, including an overview of the history of hypnosis. Hypnobirth does not offer a magical way to a pain-free birth, but rather an understanding of how hypnosis can address certain symptoms as well as unexpected circumstances associated with pregnancy and delivery. Healthcare professionals will develop a deeper understanding of the potential of hypnosis and how to practice its tools on a daily basis, learning to view hypnosis as a state of mind and way of being, as well as acquiring concrete techniques for its implementation. This work is particularly important to healthcare professionals looking to learn about hypnosis and its specific tools which they can teach expectant mothers during pregnancy and birthing./span

Biogeochemistry-William H. Schlesinger 2013 "Biogeochemistry considers how the basic chemical conditions of the Earth-from atmosphere to soil to seawater-have been and are being affected by the existence of life. Human activities in particular, from the rapid consumption of resources to the destruction of the rainforests and the expansion of smog-covered cities, are leading to rapid changes in the basic chemistry of the Earth. This expansive text pulls together the numerous fields of study encompassed by biogeochemistry to analyze the increasing demands of the growing human population on limited resources and the resulting changes in the planet's chemical makeup. The book helps students extrapolate small-

scale examples to the global level, and also discusses the instrumentation being used by NASA and its role in studies of global change. With extensive cross-referencing of chapters, figures and tables, and an interdisciplinary coverage of the topic at hand, this updated edition provides an excellent framework for courses examining global change and environmental chemistry, and is also a useful self-study guide."--Publisher's website.

Organic Phosphorus in the Environment-Benjamin L. Turner 2005 Phosphorus is essential for life, yet is often the element most limiting for biological productivity. Although most organisms take up phosphorus in an inorganic form, organic forms frequently dominate in soils and aquatic systems. Up to this point, the role of organic phosphorus and mechanisms for its dynamics have been poorly understood. However, recent advances in research have shed new light on the subject and this book brings together these advances. It covers the transformation and characterization of organic phosphorus in both terrestrial and aquatic systems. It will attract a broad range of scientists from several disciplines.

Peter Tscherkassky-Peter Tscherkassky 2005 The films of Peter Tscherkassky have played a central role in the reawakening of avant-garde film. His work has run an exciting course-from the anarchic gesture of Super-8 filmmaking through an engagement with psychoanalysis and semiotics towards a newfound pleasure with the physicality of the medium and its potential to overwhelm the audience. Essays about and by Tscherkassky are complemented by rich photographs and frame enlargements.

International Review of Industrial and Organizational Psychology 1996-Cary L. Cooper 1997-07-07 This is the eleventh in a series of annual volumes which provide authoritative reviews in the field of Industrial and Organizational Psychology. The chapters are written by established experts and the topics are carefully chosen to reflect the major concerns in the research literature and in current practice. Each chapter offers a comprehensive and critical survey of a chosen topic, and is supported by a valuable bibliography. Topics for future volumes in the series will be selected for their importance and relevance at that time, so that the series will be the main authoritative and current guide to important areas and developments in the field of Industrial and Organizational Psychology, for professional psychologists, managers and scholors.

One Night in Monaco-Blair Babylon 2020-08-18 One night in Monaco, my best friend, Maxence, disappeared. I have no idea what Maxence was doing in Monaco that night. Yeah, he loves the Monte Carlo casino—the venue of British spy movies, billionaires, Russian mafia, and roulette. But too many people in Monaco think he might be a danger to them. He never should have been there. But he was. So was Simone. She's trouble from our past at boarding school. Her husband is a good friend of some of the people who would be happier if Maxence wasn't around anymore. They tell me Maxence was here in the casino, and then a few minutes later, he was gone. Like he dropped off the face of the Earth. Or like he was dropped off a cliff and into the blue Mediterranean Sea, which was just a few feet from where he was standing. Arthur and I are here to find Maxence, no matter what it takes. But we're afraid we'll end up finding his body. The Big Book of Maker Skills-Chris Hackett 2014-11-04 This ultimate guide for tech makers covers everything from hand tools to robots plus essential techniques for completing almost any DIY project. Makers, get ready: This is your must-have guide to taking your DIY projects to the next level. Legendary fabricator and alternative engineer Chris Hackett teams up with the editors of Popular Science to offer detailed instruction on everything from basic wood- and metalworking skills to 3D printing and laser-cutting wizardry. Hackett also explains the entrepreneurial and crowd-sourcing tactics needed to transform your back-of-the-envelope idea into a gleaming finished product. In The Big Book of Maker Skills, readers learn tried-and-true techniques from the shop classes of yore—how to use a metal lathe, or pick the perfect drill bit or saw—and get introduced to a whole new world of modern manufacturing technologies, like using CAD software, printing circuits, and more. Step-by-step illustrations, helpful diagrams, and exceptional photography make this book an easy-to-follow guide to getting your project done.

Gravitational Waves from Coalescing Binaries-Stanislav Babak 2020-04-21 This book is to help post-graduate students to get into gravitational wave astronomy. We assume the knowledge of General Relativity theory, though we will concentrate on the physics and often omit mathematically strict derivations. We provide references to already existing literature where possible, this helps us to see a broad picture, skipping the details. The uniqueness of this book is in that it covers three frequency bands and three major world-wide efforts to detect gravitational waves. The LIGO and Virgo scientific collaboration has detected first gravitational waves and the merger of black holes become now almost a routine. We do expect many discoveries yet to come, especially in the joined gravitational and electromagnetic observations. LISA, the space-based gravitational wave observatory, will be launched around 2034 and will be able to detect thousands of GW sources in the milli-Hz band. Pulsar timing array observations have accumulated 20-years' worth of data and we expected detection of GWs in the nano-Hz band within the next decade. We describe the gravitational wave sources and data analysis techniques in each frequency band.

Treatment Wetlands, Second Edition-Robert H. Kadlec 2008-07-22 Completely revised and updated, Treatment Wetlands, Second Edition is still the most comprehensive resource available for the planning, design, and operation of wetland treatment systems. The book addresses the design, construction, and operation of wetlands for water pollution control. It presents the best current procedures for sizing these systems, and describing the intrinsic processes that combine to quantify performance. The Second Edition covers: New methods based on the latest research Wastewater characterization and regulatory framework analyses leading to detailed design and economics State-of-the-art procedures for analyzing hydraulics, hydrology, substrates and wetlands biogeochemistry Definition of performance expectations for traditional pollutants such as solids, oxygen demand, nutrients and pathogens, as well as for metals and a wide variety of individual organic and inorganic chemicals Discussion of methods of configuration, construction, and vegetation establishment and startup considerations Ancillary benefits of human use and wildlife habitat Specific examples of numerous applications Extensive reference base of current information The book provides a complete reference that includes: detailed information on wetland ecology, design for consistent performance, construction guidance and operational control through effective monitoring. Case histories of operational wetland treatment systems illustrate the variety of design approaches presented allowing you to tailor them to the needs of your wetlands treatment projects. The sheer amount of information found in Treatment Wetlands, Second Edition makes it the resource you will turn to again and again.

Advances in Agronomy- 2004-04-16 Advances in Agronomy continues to be recognized as a leading reference and a first-rate source of the latest research in agronomy. Major reviews deal with the current topics of interest to agronomists, as well as crop and soil scientists. As always, the subjects covered are varied and exemplary of the myriad subject matter dealt with by this long-running serial. Editor Donald Sparks, former president of the Soil Science Society of America and current president of the International Union of Soil Science, is the S. Hallock du Pont Chair of Plant and Soil Sciences at The University of Delaware. Volume 82 contains eight state-of-the-art reviews on topics of interest in the plant and soil sciences. Three of the reviews present cutting-edge molecular scale techniques and approaches that directly impact food production, crop improvement, and environmental quality and sustainability.
