Bitter-Jennifer McLagan 2014-09-16 The champion of uncelebrated foods including fat, offal, and bones, Jennifer McLagan turns her attention to a fascinating, underappreciated, and trending topic: bitterness. What do coffee, IPA beer, dark chocolate, and radicchio all have in common? They're bitter. While some culinary cultures, such as in Italy and parts of Asia, have an inherent appreciation for bitter flavors (think Campari and Chinese bitter melon), little attention has been given to bitterness in North America: we're much more likely to reach for salty or sweet. However, with a surge in the popularity of craft beers; dark chocolate; coffee; greens like arugula, dandelion, radicchio, and frisée; high-quality olive oil; and cocktails made with Campari and absinthe—all foods and drinks with elements of bitterness—bitter is finally getting its due. In this deep and fascinating exploration of bitter through science, culture, history, and 100 deliciously idiosyncratic recipes—like Cardoon Beef Tagine, White Asparagus with Blood Orange Sauce, and Campari Granita—award-winning author Jennifer McLagan makes a case for this misunderstood flavor and explains how adding a touch of bitter to a dish creates an exciting taste dimension that will bring your cooking to life. From the Hardcover edition.

How to Build a Man-EC NORMAN 2010-10-06 God created and from that beginning it was Eve, who is perceived to be the progenitor of women problems. E. C. Norman transforms the story of creation in her new book How To Build A Man, Construction on the "Wo." She introduces the five construction tools used by Eve. She examines the differences between Adam and Eve and the interactions in the midst of Satan and Eve and other biblical women that followed Eve's path. This book will transport you through creation and lead you back through the expectations of the "Wo." E. C. Norman expresses how important it is for women to learn from Eve and her construction tools and see how they are still in operation today. Taste Chemistry-R.S. Shallenberger 1993 The object ofthis text is to examine, and elaborate on the meaning of the established premise that 'taste is a chemical sense.' In particular, the major effort is directed toward the degree to which chemical principles apply to phenomena associated with the inductive (recognition) phase of taste. A second objective is to describe the structure and properties of compounds with varying taste that allow decisions to be made with respect to the probable nature of the recognition chemistry for the different tastes, and the probable nature of the receptor(s) for those tastes. A final objective is to include appropriate interdisciplinary observations that have application to solving problems related to the chemical nature of taste. Taste is the most easily accessible chemical structure-biological activity relationship, and taste chemistry studies, i.e. the chemistry of sweetness, saltiness, sourness, and bitterness, have application to general biology, physiology, and pharmacology. Because it involves sensory perception, taste is also of interest to psychologists, and has application to the food and agricultural industries. The largest portion of the text is directed toward sweetness as, due to economic and other factors, the majority of the scientific studies are concerned with sweetness. The text begins with a prologue to describe the problems associated with the study of taste chemistry. Then, there is an introductory chapter to serve as an overview of the general interdisciplinary knowledge of the subject. It is followed by a chapter on the fundamental chemical principles that apply to taste induction chemistry.
