A Thousand Pearls-H.G. Hutting 2007-11-16 As the twilight turned into night, the pyramids lay deserted. The Tuaregs on silent horses were flying across the desert around the pyramids and the great Sphinx, making sure that what was about to take place was unobserved. A cortege of torches was winding its way down the tall dune towards the great Sphinx. Phillipa, holding the silver Urn with the Heidrichs ashes, rode at the center of the cortege. Reaching the Sphinx, the torchbearers broke into two columns to form an honor guard of light through which Phillipa rode to meet the matriarch standing between the Sphinx’s mighty paws. Phillipa slowly handed the urn to her. A deep hole had been chiseled into the Sphinx’s chest where one would think the heart might be. The urn was pushed gently into the cool depth of the Sphinx. The opening disappeared in front of Phillipa’s eyes under the skilled hands of a stonemason. No one would suspect that the Sphinx had been tampered with. One by one the Tuareg torchbearers rode up the passage between the mighty paws of the Sphinx and dropped their torches in front of the Heidrichs secret burial chamber--a final salute to the man who had translated their tablets. That night they slept outside under the stars. The matriarch’s stallion came to greet Phillipa. She rubbed his forehead and velvety nose and then kissed it, as she had done long ago when she had been here with Udah Singh. “He likes you and wishes you well,” said the matriarch behind her. “ You have a gift with horses that I have not seen before.” She continued, “You still love both equally, and that confuses you profoundly. Give yourself permission to love and be loved. Don’t let conventions and western customs dictate your life. Live happy and free.”

The End of Desertification?-Roy H. Behnke 2016-04-12 The question in the title of this book draws attention to the shortcomings of a concept that has become a political tool of global importance even as the scientific basis for its use grows weaker. The concept of desertification, it can be argued, has ceased to be analytically useful and distorts our understanding of social-environmental systems and their resiliency, particularly in poor countries with variable rainfall and persistent poverty. For better policy and governance, we need to reconsider the scientific justification for international attempts to combat desertification. Our exploration of these issues begins in the Sahel of West Africa, where a series of severe droughts at the end of the 20th century led to the global institutionalization of the idea of desertification. It now seems incontrovertible that these droughts were not caused primarily by local land use mismanagement, effectively terminating a long-standing policy and scientific debate. There is now an opportunity to treat this episode as an object lesson in the relationship between science, the formation of public opinion and international policy-making. Looking beyond the Sahel, the chapters in this book provide case studies from around the world that examine the use and relevance of the desertification concept. Despite an increasingly sophisticated understanding of dryland environments and societies, the uses now being made of the desertification concept in parts of Asia exhibit many of the shortcomings of earlier work done in Africa. It took scientists more than three decades to transform a perceived desertification crisis in the Sahel into a non-event. This book is an effort to critically examine that experience and accelerate the learning process in other parts of the world.

Modelling and Control of Dialysis Systems-Ahmad Taher Azar 2012-08-04 The book, to the best of the editor’s knowledge, is the first text of its kind that presents both the traditional and the modern aspects of ‘dialysis modeling and control’ in a clear, insightful and highly comprehensive writing style. It provides an in-depth analysis of the mathematical models and algorithms, and demonstrates their applications in real world problems of significant complexity. The material of this book can be useful to advanced undergraduate and graduate biomedical engineering students. This text provides an important focus on helping students understand how new concepts are related to and rely upon concepts previously presented. Also, researchers and practitioners in the field of dialysis, control systems, soft computing may benefit from it. The material is organized into 32 chapters. This book explains concepts in a clear, matter-of-fact style. In order to make the reader aware of the applied side of the subject, the book includes: Chapter openers with a chapter outline, chapter objectives, key terms list, and abstract. Solved numerical examples to illustrate the application of a particular concept, and also to encourage good problem-solving skills. More than 1000 questions to give the readers a better insight to the subject. Case studies to understand the significance of the joint usage of the dialysis modeling and control techniques in interesting problems of the real world. Summation and deepening of authors’ works in recent years in the fields related. So the readers can get latest information, including latest research surveys and references related to the subjects through this book. It is hoped that through this book the reader will: Understand the fundamentals of dialysis systems and recognize when it is advantageous to use them. Gain an understanding of the wide range of dialysis modeling techniques Be able to use soft computing techniques in dialysis applications. Gain familiarity with online systems of dialysis and their applications. Recognize the relationship between conceptual understanding and problem-solving approaches. The editors would like to take this opportunity to thank all the authors for their contributions to this textbook. Without the hard work of our contributors, this book would have not been possible. The encouragement and patience of series Editor, Thomas Ditzinger is very much appreciated. Without his continuous help and assistance during the entire course of this project, the production of the book would have taken a great deal longer.

Being and Place among the Tlingit-Thomas F. Thornton 2011-07-01 In Being and Place among the Tlingit, anthropologist Thomas F. Thornton examines the concept of place in the language, social structure, economy, and ritual of southeast Alaska’s Tlingit Indians. Place signifies not only a specific geographical location but also reveals the ways in which individuals and social groups define themselves. The notion of place consists of three dimensions - space, time, and experience - which are culturally and environmentally structured. Thornton examines each in detail to show how individual and collective Tlingit notions of place, being, and identity are formed. As he observes, despite cultural and environmental changes over time, particularly in the post-contact era since the late eighteenth century, Tlingits continue to bind themselves and their culture to places and landscapes in distinctive ways. He offers insight into how Tlingits in particular, and humans in general, conceptualize their relationship to the lands they inhabit, arguing for a study of place that considers all aspects of human interaction with landscape. In Tlingit, it is difficult even to introduce oneself without referencing places in Lingit Aani (Tlingit Country). Geographic references are embedded in personal names, clan names, house names, and, most obviously, in k-waan names, which define regions of dwelling. To say one is Sheet’ka K-waan defines one as a member of the

Tlingit community that inhabits Sheet’ka (Sitka). Being and Place among the Tlingit makes a substantive contribution to the literature on the Tlingit, the Northwest Coast cultural area, Native American and indigenous studies, and to the growing social scientific and humanistic literature on space, place, and landscape.
