Middle English Legends of Women Saints-Martha G Blalock 2003-03-01

Middle English Legends of Women Saints presents a collection of saints' Lives intended to suggest the diversity of possibilities beneath the supposedly fixed and predictable surfaces of the legends, using multiple retellings of the same legend to illustrate that medieval readers and listeners did not just passively receive saints' legends but continually and actively appropriated them. The collection opens with legends about two royal (or supposedly royal) women, Frideswide and Mary Magdalen, and continues with those of three popular virgin martyrs, Margaret of Antioch, Christina of Tyre, and Katherine of Alexandria. The final portion of the collection is devoted to St. Anne, mother of the Virgin Mary. The collection includes a number of relatively unknown texts that have not appeared in print since Horstmann's transcriptions in the nineteenth century and a few that have never before been published.

Exploring the Southern Sky-Svend Laustsen 2012-12-06 On the occasion of its 25th anniversary the European Southern Observatory (ESO), is publishing a selection from its photographic treasures of the southern skies: 90 colour and 147 black and white plates have been reproduced. Thirty maps make it easy to locate the objects shown. Part 1 is devoted to extragalactic phenomena. Part 2 deals with our Galaxy. Part 3 contains the results from observations of minor bodies in the solar system (asteroids and comets with an emphasis on the most beautiful Halley's comet photographs). The final part presents the Observatory itself.

Semiotics and Visual Communication III-Evripides Zantides 2019-11-12 The chapters in this book consist of selected papers that were presented at the 3rd International Conference and Poster Exhibition on Semiotics and Visual Communication at the Cyprus University of Technology in November 2017. They investigate the theme of the third conference, "The Semiotics of Branding", and look at branding and brand design as endorsing a reputation and inhabiting a status of almost mythical proportion that has triumphed over the past few decades. Emerging from its forerunner (corporate identity) to incorporate advertising, consumer lifestyles and attitudes, image-rights, market-research, customisation, global expansion, sound and semiotics, and "the consumer-as-the-brand", the word "branding" currently appears to be bigger than its own umbrella definition. From tribal markers, such as totems, scarifications and tattoos, to emblems of power, language, fashion, architectural space, insignias of communal groups, heraldic devices, religious and political symbols, national flags and the like, a form of branding is at work that responds to the need to determine the presence and interaction of specific groups, persons or institutions through shared codes of meaning.

The NexStar Evolution and SkyPortal User's Guide-James L. Chen

2016-05-26 This book serves as a comprehensive guide for using a Nexstar Evolution mount with WiFi SkyPortal control, walking the reader through the process for aligning and operating the system from a tablet or smartphone. The next generation Go-To mount from Celestron, this is compatible not only with the Nextstar Evolution but also with older mounts. It is the ideal resource for anyone who owns, or is thinking of owning, a Nexstar Evolution telescope, or adapting their existing Celestron mount. Pros and cons of the system are thoroughly covered with a critical depth that addresses any possible question by users. Beginning with a brief history of Go-To telescopes and the genesis of this still new technology, the author covers every aspect of the newly expanding capability in observing. This includes the associated Sky Portal smartphone and tablet application, the transition from the original Nexstar GoTo system to the new SkyPortal system, the use of the Sky Portal application with its Sky Safari 4 basic software and Celestron WiFi adaptations, and discussions on the use of SkyPortal application using the Celestron adapter on older Celestron mounts. Comments and recommendations for equipment enable the reader to successfully use and appreciate the new WiFi capability without becoming overwhelmed. Extensively illustrated using actual screenshots from the program interface, this is the only guide to the Nextstar SkyPortal an observer will need.

A Guide to Hubble Space Telescope Objects-James L. Chen 2015-07-16

From the authors of "How to Find the Apollo Landing Sites," this is a guide to connecting the view above with the history of recent scientific discoveries

from the Hubble Space Telescope. Each selected HST photo is shown with a sky map and a photograph or drawing to illustrate where to find it and how it should appear from a backyard telescope. Here is the casual observer's chance to locate the deep space objects visually, and appreciate the historic Hubble photos in comparison to what is visible from a backyard telescope. HST objects of all types are addressed, from Messier objects, Caldwell objects, and NGC objects, and are arranged in terms of what can be seen during the seasons. Additionally, the reader is given an historical perspective on the work of Edwin Hubble, while locating and viewing the deep space objects that changed astronomy forever. Countless people have seen the amazing photographs taken by the Hubble Space Telescope. But how many people can actually point out where in the sky those objects are? Why were these objects chosen to be studied? What discoveries were made from the Hubble Space Telescope photographs? This book is for anyone who wants answers to these questions.

Primordial Cosmology-Patrick Peter 2013-02-14 This book provides an extensive survey of all the physics necessary to understand the current developments in the field of fundamental cosmology, as well as an overview of the observational data and methods. It will help students to get into research by providing definitions and main techniques and ideas discussed today. The book is divided into three parts. Part 1 summarises the fundamentals in theoretical physics needed in cosmology (general relativity, field theory, particle physics). Part 2 describes the standard model of cosmology and includes cosmological solutions of Einstein equations, the hot big bang model, cosmological perturbation theory, cosmic microwave background anisotropies, lensing and evidence for dark matter, and inflation. Part 3 describes extensions of this model and opens up current research in the field: scalar-tensor theories, supersymmetry, the cosmological constant problem and acceleration of the universe, topology of the universe, grand unification and baryogenesis, topological defects and phase transitions, string inspired cosmology including branes and the latest developments. The book provides details of all derivations and leads the student up to the level of research articles.
