By examining the changing nature of anthropological knowledge and of the production of that knowledge, this book challenges the notion that only western societies have produced social theories of modernity and of global scope. Knowledge of society can no longer be restricted to a knowledge of face-to-face social relations but must encompass the effect of technology, global consumption patterns and changing geo-political configurations. The Future of Anthropological Knowledge will be of interest to anthropologists and students of culture and society.

Reading Auschwitz-Mary Lagerwey 1998-10-27 "My mind refuses to play its part in the scholarly exercise. I walk around in a daze, remembering occasionally to take a picture. I've heard that many people cry here, but I am too numb to feel. The wind whips through my wool coat. I am very cold, and I imagine what the wind would have felt like for someone here fifty years ago without coat, boots, or gloves. Hours later as I write, I tell myself a story about the day, hoping it is true, and hoping it will make sense of what I did and did not feel." —From the Foreword Most of us learn of Auschwitz and the Holocaust through the writings of Anne Frank and Elie Wiesel. Remarkable as their stories are, they leave many voices of Auschwitz unheard. Mary Lagerwey seeks to complicate our memory of Auschwitz by reading less canonical survivors: Jean Amery, Charlotte Delbo, Fania Fenelon, Szymon Laks, Primo Levi, and Sara Nomberg-Przytyk. She reads for how gender, social class, and ethnicity color their tellings. She asks whether we can—whether we should—make sense of Auschwitz. And throughout, Lagerwey reveals her own role in her research; tells of her own fears and anxieties presenting what she, a non-Jew born after the fall of Nazism, can only know second-hand. For any student of the Holocaust, for anyone trying to make sense of the final solution, Reading Auschwitz represents a powerful struggle with what it means to read and tell stories after Auschwitz.

Principles of European Antitrust Enforcement-Wouter Wils 2005-02-22 After 1 May 2004, the enforcement of European antitrust law entered a new era. At the same time as 10 new Member States joined the European Union, Regulation No 17, which had governed the enforcement of Articles 81 and 82 EC since 1962, was replaced by Regulation No 1/2003, which has ushered in far-reaching changes. This book brings together six essays which analyse the background and main characteristics of the new enforcement system, as well as a number of outstanding questions and potential areas of further reform, including the question whether private antitrust enforcement should be encouraged, and the question whether the decisional power in antitrust matters should be transferred to the courts. Special attention is given to the problem of the compatibility of the new enforcement system and of the practice of European antitrust enforcement with the requirements of the European Convention of Human Rights and the Charter of Fundamental Rights of the European Union, including the principle of ne bis in idem, the privilege against self-incrimination, and the right to an independent and impartial tribunal. On many of these issues, the discussion contained in this book is not only legal, but also includes an economic analysis from the perspective of efficient law enforcement.

The New Woman in Fiction and Fact-A. Richardson 2019-06-12 A cultural icon of the fin de siècle , the New Woman was not one figure, but several. In the guise of a bicycling, cigarette-smoking Amazon, the New Woman romped through the pages of Punch and popular fiction; as a neurosthenic victim of social oppression, she suffered in the pages of New Woman novels such as Sarah Grand's hugely successful The Heavenly Twins . The New Woman in Fiction and Fact marks a radically new departure in nineteenth-century scholarship to explore the polyvalocal nature of the late Victorian debates around gender, motherhood, class, race and imperialism which converged in the name of the New Woman.

Stop Here. This is the Place-Susan Conley 2016-04-15 Winky Lewis and Susan Conley, a photographer and a writer in Portland, tried an experiment. At the start of every week for a year, Winky sent Susan a photograph: of their children, of the street where they live as neighbors, and of other green places in Maine. By the end of that week Susan sent a tiny story back that talked to the photograph. Stop Here. This Is The Place tells the story of a year in which children's arms and legs go longer, and traces of babyhood fade—a year that feels interminable to a ten-year-old looking forward and fleeting to that ten-year-old's mother, who can always stop here, go back and remember. This delightfully evocative gift book is a reminder to stop and enjoy the precious time we have with our kids while we have them. Through Susan's recollections of moments from her childhood and the ongoing lives of her children, we're reminded of our own childhoods, and of the necessity to stop and pay attention, to hold on.

Statistical Mechanics of Turbulent Flows-Stefan Heinz 2013-03-09 The simulation of technological and environmental flows is very important for many industrial developments. A major challenge related to their modeling is to involve the characteristic turbulence that appears in most of these flows. The traditional way to tackle this question is to use deterministic equations where the effects of turbulence are directly parameterized, i. e., assumed as functions of the variables considered. However, this approach often becomes problematic, in particular if reacting flows have to be simulated. In many cases, it turns out that appropriate approximations for the closure of deterministic equations are simply unavailable. The alternative to the traditional way of modeling turbulence is to construct stochastic models which explain the random nature of turbulence. The application of such models is very attractive: one can overcome the closure problems that are inherent to deterministic methods on the basis of relatively simple and physically consistent models. Thus, from a general point of view, the use of stochastic methods for turbulence simulations seems to be the optimal way to solve most of the problems related to industrial flow simulations. However, it turns out that this is not as simple as it looks at first glance. The first question concerns the numerical solution of stochastic equations for flows of environmental and technological interest. To calculate industrial flows, 3 one often has to consider a number of grid cells that is of the order of 100 .
